GENERAL SPECIFICATIONS

PART 1-GENERAL

All work shall be performed in accordance with the governing codes. Comply with the requirements of the local jurisdiction and all supplying utilities. Comply with EPA Safe Water Drinking Act, including all lead-free requirements.

The intent of the drawings is to depict fully functioning new and revised HVAC and plumbing systems. All incidental and necessary items that are normally required for the type of work shown on the plans, but that are not explicitly shown on the plans, shall be included in the work.

All work shall be performed in a neat and professional manner. The appearance of the finished work is important to the owner. All piping shall be run parallel to building structure. All penetrations shall be neat.

All materials shall be new and in good condition.

Contractor shall obtain and pay for all necessary permits.

Contractor shall provide engineer with a complete copy of all comments received from the City or County Building Inspection department, Health Department, and all other reviewing agencies. Comments shall be provided within five days of the contractor receiving them. Engineer shall not be held responsible for delays to the project resulting from untimely receipt of comments from the contractor.

Contractor may substitute fixtures and equipment by alternate manufacturers provided they are of substantially equivalent quality and capacity.

Contractor shall notify Engineer within 24 hours if he is notified, becomes aware of himself, or is of the opinion, that there is an error or omission in the specifications or drawings. Engineer shall have seven calendar days to address any alleged error or omission. If Contractor does not notify Engineer within 24 hours and/or if Contractor continues to work in and around the area of the alleged error or omission prior to a resolution of the alleged error or omission, Engineer shall not be liable for any rework required to correct the alleged error or omission. Rework shall be defined as any additional costs above what the Owner would have incurred if the alleged error were not in the construction drawings and/or any materials or equipment omitted were included in the construction drawings.

PART 2–COORDINATION

Contractor shall recognize that plans are diagrammatic in nature.

Consult all drawings of each contract for the project to predetermine that work and equipment will fit as planned. Check the location of piping, ducts, equipment, etc., to determine that all work clears openings, structural members, cabinets, lights, outlets, and other work or equipment having fixed locations.

Plan all work so that it proceeds with a minimum of interference with other trades. All openings required in the building construction for the installation of mechanical work are the responsibility of the trade providing such work unless otherwise noted or shown. Provisions shall be made for all special frames, openings, and pipe sleeves as required.

Cooperate with other trades in furnishing material and information for correct location, in proper sequence, of all wiring, openings, clearances, access doors, and the like.

If at any time and in any case a change in location of piping, ducts, equipment, etc., becomes necessary due to obstacles or the installation of the work of other trades shown on any of the project drawings, make such required changes at no extra cost for materials or labor.

Cutting and patching shall be the responsibility of the trade requiring cutting and patching.

PART 3–ACCESS TO EQUIPMENT

Locate all motors, valves, control devices, specialties, fire dampers, etc., to provide easy access for operation, repair, and maintenance. If concealed in ductwork, walls, ceilings or other locations, provide and install access doors. Access doors in fire-rated assemblies shall have fire-rating suitable for assembly.

PART 4–SHOP DRAWINGS

Provide Engineer and Architect each with one electronic copy of submittals on all equipment, fixtures, materials and other manufactured items. In general, all submittals and shop drawings must be received and accepted prior to construction. Engineer and Architect will have 10 business days to review submittals.

All submittals shall include the mark of the piece of equipment being submitted on; if a mark was not indicated on the drawings or elsewhere in these specs, a short description of the item may be used instead. The model number of proposed item shall be highlighted on the cut sheets. All proposed options or accessories shall also be highlighted. Submittals that do not contain this identifying information shall be REJECTED.

PART 5–TESTING AND BALANCING

Contractor shall adjust furnaces and air devices to the quantities shown on the drawings, with variances from design as allowed by the current edition of the National Environmental Balancing Bureau (NEBB) Standards. Provide Owner and Engineer each with one electronic copy of final report on NEBB or SMACNA forms.

PART 6–OPERATING TESTS AND ADJUSTMENTS

After substantial completion of the work, but before final payment is made, run a test over a sufficient period of time to prove the proper capacity and performance of all apparatus and of the systems as a whole. Test and adjust alarms for satisfactory operation. Thoroughly check all safety and protection devices to assure proper operation and protection.

PART 7–INSTRUCTIONS IN OPERATION

At the conclusion of the project, Contractor shall give complete operating and maintenance instructions to the operating personnel selected by the Owner.

PART 8–WARRANTY AND SERVICE

Contractor shall provide one year warranty on all work and equipment commencing from the date of substantial completion.

Contractor shall provide all service, maintenance, and trouble shooting on all mechanical work through the date of completion and continuing for a period of 30 days after that date.

PART 9–MAINTENANCE MANUALS

At the conclusion of the project, Contractor shall provide one set of the maintenance manuals to Owner. Manuals shall be either paper or electronic as directed by Owner. GENERAL ELECTRICAL NOTES

(RE: ALL ELECTRICAL SHEETS)

1. ALL ELECTRICAL EQUIPMENT AND SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH THE NATIONAL ELECTRICAL CODE, INTERNATIONAL FIRE CODE, AND ALL OTHER STATE AND LOCAL CODES. CONTRACTOR SHALL IMMEDIATELY NOTIFY ENGINEER IN WRITING IF PORTIONS OF THE DESIGN SET OR FIELD CONDITIONS DO NOT MEET REQUIRED CODES.
2. PROVIDE FIRESTOPPING FOR ALL FLOOR, CEILING AND FIREWALL PENETRATIONS FROM ELECTRICAL FIXTURE, DEVICE, RACEWAY, AND CABLE PENETRATIONS. SEE ARCHITECTURAL DRAWINGS FOR FIREWALL ASSEMBLY LOCATIONS.
3. FIRE ALARM SYSTEM: THIS BUILDING IS A 'B' OCCUPANCY PER ARCHITECTS CODE EVALUATION. PER THE 2021 IBC 902.2.2 NO FIRE ALARM IS REQUIRED AS THERE IS LESS THAN 500 TOTAL OCCUPANTS AND NOT MORE THAN 100 OCCUPANTS BELOW OR ABOVE THE LOWEST LEVEL OF EXIT DISCHARGE. FIRE ALARM MONITORING SYSTEM TO BE PRICED AS AN BID ALTERNATE. INDUSTRY LEADING MANUFACTURES LIKE SILENT KNIGHT, POTTER, AND HONEYWELL ARE ACCEPTABLE.
4. PROVIDE AND INSTALL 3/4"CO TO ACCESSIBLE LOCATION ABOVE SUSPENDED CEILING, UNLESS NOTED OTHERWISE FOR DATA, AND TELEPHONE DEVICES. DATA, AND TELEPHONE CABLING ARE TO BE PROVIDE FOR THIS CONTRACT. INCLUDE A BUSHING FOR CONDUIT TERMINATING IN ACCESSIBLE CEILING SPACE. LOW VOLTAGE WIRING IS ACCEPTABLE TO RUN IN FREE AIR RACEWAY ABOVE DROP CEILING. ROUTES TO BE CONSOLIDATED WHERE POSSIBLE USING ANSI/TIA APPROVED HANGING METHODS, SPACING NOT TO EXCEED 4 FT BETWEEN HANGERS. EACH NETWORK DROP INDICATED REPRESENTS TWO POINTS OF CONNECTION. ALL LOW VOLTAGE SHOWN TO BE NEWLY INSTALLED. LOW VOLTAGE IS TO INCLUDE THE FOLLOWING: DOOR ACCESS CONTROL, NETWORK/DATA CABLING, CAMERA, BUILDING MANAGEMENT, FIRE ALARM (BID ALTERNATE), AND LOCAL SPEAKER SYSTEM FOR PANIC ALARM.
5. EMERGENCY LIGHTING SYMBOLS ARE SHADED ON THE LIGHTING PLANS. EMERGENCY SOURCE SHALL BE BATTERY BACKED BALLAST WITH MINIMUM 1400 LUMEN OUTPUT FOR A 90 MINUTE PERIOD, UNLESS NOTED OTHERWISE. PROVIDE UNSWITCHED CONDUCTORS FOR CHARGING CIRCUIT AS REQUIRED.
6. DESIGN OF ELECTRICAL REQUIREMENTS, FOR MECHANICAL EQUIPMENT, IS BASED ON MECHANICAL EQUIPMENT SPECIFIED. MECHANICAL CONTRACTOR SHALL COORDINATE WITH ELECTRICAL CONTRACTOR IF EQUIPMENT PURCHASED IS DIFFERENT FROM THAT SPECIFIED STILL MEETS DESIGN INTENT, INCLUDING BUT NOT LIMITED TO OVERCURRENT PROTECTION, LOCAL DISCONNECTING MEANS, WIRE SIZING AND DESIGN COSTS.
